

## Customized Material Solutions

With years of experience in engineering plastics modification, we focus on high-performance material systems such as PBT and PA, providing customized material solutions for diverse industrial applications. Our goal is to achieve the optimal balance between performance, processing, and cost.

### Customization Capabilities:

- Tailored formulation development based on product structure and application environment
- Integrated performance design including flame retardancy, reinforcement, toughening, heat and weather resistance
- Flexible control of flowability, shrinkage, and surface finish
- Color customization available (high-gloss, matte, and special color effects)
- Meets requirements for electrical performance, dimensional stability, and long-term reliability

### Technical Advantages:

- Deep integration of material design with end-use applications
- Comprehensive quality control system ensuring consistency and stability
- Fast development response to shorten product launch cycles
- Full-process technical support from sampling to mass production

### Applications:

Widely used in automotive components, electrical & electronics, lighting systems, and new energy sectors, as well as **optical materials, medical materials, and industrial structural parts** for high-end applications.
